Notes:
→ If user attempt to open page products redirect to login page if not logged in.
→ Make sure your data is clean before submitting to the server .
→ Show appropriate error messages to the user.
→ Your design must be responsive and mobile optimized as much as possible.
→ The website is in English, but multilingual is a **big plus**.
→ Keep your API clean and documented as much as possible.
→ Authentication and authorization are **must**.
→ Your app could be hosted on one server or two separate servers it's up to you.
→ You are free to add extra features, but the main features mentioned above comes first.
